EDUCATION

Cornell University, SC Johnson Graduate School of Management Aug 2021–Present
Ph.D. in Quantitative Marketing
Minor Field: Applied Statistics
Committee: Vrinda Kadiyali (Chair), Emaad Manzoor, Omid Rafieian, Dan Kowal (Statistics)

Korea Advanced Institute of Science and Technology Feb 2015–Feb 2017
M.S. in Management Engineering, Information Systems

Ulsan National Institute of Science and Technology Mar 2010–Aug 2014
B.S. in Computer Science and Engineering, Minor in Finance and Accounting

RESEARCH INTERESTS

Topics: Algorithmic Pricing, Housing Markets, Public Policy
Methods: Causal Inference, Bayesian Methods, Machine Learning, Large Language Models

WORKING PAPERS

Kim, J. and Kadiyali, V., "The Impact of San Diego's Ban on Private Data in Algorithmic Rent Pricing: Evidence from Online Reviews with Large Language Models" **(Job Market Paper)**

Presentations: Cornell University

Kim, J., Anand, P., and Kadiyali, V., "The Effects of Rent Control on Renter Experience and Consumption: Evidence from St. Paul's 2022 Ordinance"

Presentations: ISMS Marketing Science Conference, University of Maryland, Carnegie Mellon University, Washington University in St. Louis

Kim, J., Kowal, D., and Ruppert, D., "Statistical Inference with Large Language Models: A Bayesian Framework for Measurement Errors"

Presentations: Cornell University

HONORS & AWARDS

Nagesh Gavirneni Outstanding Doctoral Student Award, Cornell University	2026
AMA-Sheth Doctoral Consortium Fellow	2026
250th Anniversary Research Spotlight, Cornell University [Link]	2026
ISMS Doctoral Consortium Fellow	2025
FinTech@Cornell Student Fellowship	2022
Cornell SC Johnson College Doctoral Fellowship	2021–Present
Best Student Paper Award, Post-ICIS 2017 KrAIS Research Workshop	2017
Best Graduate Student Paper Award, KAIST	2017
Most Innovative Research-in-Progress Paper Runner-Up, International Conference on Information Systems	2016
Editor's Picks from the American Institute of Physics, AIP Advances	2016
Scholarship for Academic Excellence among 2015 Entering Class, KAIST	2015
Excellence Prize (Top 1%, 3rd Place over 322 teams) at Hackathon for Big Data, Ministry of Science, ICT and Future Planning	2014
Dean's List for Four Semesters, UNIST	2010, 2012–2014
Undergraduate Research Opportunity Program, Korea Foundation for Advancement of Science & Creativity	2013
National Natural Science and Engineering Scholarship, Korea Student Aid Foundation	2010–2014

TEACHING

Instructor

Cornell University — Fall 2025

BANA 5440 Introduction to Data Programming, MSBA

StudyPie — Oct 2018–Apr 2019

Deep Learning Models for Financial Time Series Prediction [Link]

Guest Lecturer

KAIST FMBA – Introduction to FinTech (Prof. Lee, B.) Mar 2021, Mar 2023, Apr 2024
Investment Strategies in FinTech Industry [Link]

Korea Summer Session on Causal Inference (Prof. Park, J.) Jul 2021
Applications of Machine Learning in Marketing [Link]

KAIST MBA – Business Analytics (Prof. Oh, W.) Apr 2019
Intelligent Video Analytics with Deep Learning [Link]

KAIST IT Management Summer Research Workshop (Prof. Park, J.) Aug 2017
Machine Learning APIs and Web Scraping [Link]

Teaching Assistant

Cornell University

NCCT 5030/5031 Marketing Management Spring, Fall 2023
AEM 4435 / NBA 6390 Data-Driven Marketing Fall 2022
NCC 5030 Marketing Management Summer 2022

PROFESSIONAL EXPERIENCE

December & Company Asset Management, Seoul, South Korea Apr 2019–Jul 2021
Senior Researcher / Quantitative Portfolio Manager (Alternative Military Service)

- Developed generative models of textual factors from SEC filings to predict asset returns
- Designed sector rotation and alternative-asset strategies using economic cycle indicators

NICE Pricing and Information, Seoul, South Korea Aug 2016–Apr 2019
Quantitative Researcher, Financial Engineering Center (Alternative Military Service)

- Modeled IFRS 9 default probabilities using non-homogeneous continuous-time Markov chains
- Developed Heston volatility surfaces and performed return-based style analysis of bond portfolios

NewsJAM, Ulsan, South Korea Jun 2013–Feb 2014
Co-Founder and Chief Technology Officer

- Built NLP systems for news summarization and network visualization; won a $60K incubator grant

PATENTS

Kim, J., et al., "Automated Trading System and Method," Korean Patent 10-2433324, Assignee: December & Company Inc., 2022. (Application No. 10-2019-0117628, filed Sep 24, 2019)

INVITE-ONLY WORKSHOPS

Econometric Society, Africa Training Workshop in Econometrics, 2024

SERVICES

Ad-hoc Reviewer: ICIS (2019, 2021); ICEC (2017)

OTHER INFORMATION

Work Authorization: U.S. Permanent Residence (I-485 and EAD Pending); No Sponsorship Required
Language: Korean (Native), English (Fluent)
Programming: Python, C/C++, Java, R, STATA, Matlab, SQL, JavaScript, HTML, CSS

SELECTED RESEARCH ABSTRACTS

"The Impact of San Diego's Ban on Private Data in Algorithmic Rent Pricing: Evidence from Online Reviews with Large Language Models," Kim, J. and Kadiyali, V. (Job Market Paper)

In an effort to improve housing affordability, San Diego in 2025 banned the use of competitors' private data (e.g., actual rents and occupancy) in algorithmic rent pricing while continuing to permit the use of public data (e.g., advertised rents). Pooling competitors' private data through pricing algorithms can facilitate coordination among landlords and sustain higher rents, but it can also improve demand forecasts, allowing rents to fall when demand weakens. We study the policy's effect on renter satisfaction with rent price and non-price services using 57,262 Google reviews of 1,139 apartment buildings in San Diego and comparable California cities. Human annotations provide coarse measures of satisfaction from review text and reflect differences in annotators' use of rating scales (e.g., leniency or strictness), so treating them as outcomes need not recover effects on underlying satisfaction. We develop a latent-outcome model that accounts for annotator heterogeneity and identifies causal effects on latent satisfaction. Human annotations are costly, while scalable LLM annotations need not agree with them. Using semiparametric efficiency theory, we derive an estimator that uses LLM annotations to improve precision in estimating latent causal effects. Nine months after the ban, overall star ratings fall by 0.14 points on a five-point scale, contrary to the policy's pro-renter intent. Relative to the no-policy counterfactual, we find a 79% probability of lower rent-price satisfaction and a 95% probability of higher satisfaction with non-price services. The pattern is more consistent with a loss of pricing efficiency than with weakened coordination. As the DOJ–RealPage settlement introduces a similar nationwide restriction, our findings have implications for policymakers and apartment managers.

"The Effects of Rent Control on Renter Experience and Consumption: Evidence from St. Paul's 2022 Ordinance," Kim, J., Anand, P., and Kadiyali, V.

How does housing affordability policy affect consumer experience and grocery spending? We examine St. Paul's 2022 rent control policy using 110,258 renter reviews from 2,285 apartments and grocery sales data from 123 stores in the 18 months after the policy. We compare St. Paul (policy area) and surrounding spillover areas to comparable U.S. cities as controls. Renters rate their apartment experiences higher by 0.474 points (on a 5-point scale) in the policy area and by 0.157 points in the spillover areas. In the 18 months after implementation, no dimension of the multi-attribute service experience worsens, suggesting net satisfaction gains for renters in our time window. Grocery expenditure declines by 8% in the policy area and 3% in the spillover areas over the two years following implementation, through two mechanisms: the exit of higher-income renters from the policy area and likely increased rents in the spillover areas. Renter satisfaction thus improves while grocery demand falls in the affected neighborhoods. The findings inform apartment managers setting service quality under price regulation, grocery retailers adjusting assortment and pricing to changing neighborhood demographics, and policymakers weighing the consequences of rent control for renters, businesses, and spillover areas.

"Statistical Inference with Large Language Models: A Bayesian Framework for Measurement Errors," Kim, J., Kowal, D., and Ruppert, D.

Large language models (LLMs) enable researchers to measure constructs of interest from text at scale. We study treatment effect estimation using LLM-measured outputs as causal outcomes. Standard plug-in estimators can substantially underestimate uncertainty, even when point estimates are unbiased. An LLM's errors are not independent. It misreads semantically similar units in similar ways, inducing correlated errors. This correlation is information, not nuisance, but its structure is unknown a priori. We develop a Bayesian framework that combines a small labeled sample with large-scale LLM outputs to correct the LLM's measurement errors. Estimating jointly, rather than in stages, allows labeled and unlabeled data to inform each other, while the learned covariance structure induces precision-weighted posterior inference, improving statistical efficiency over methods that assume independent errors. In a randomized experiment, we document that this dependence is real, survives fine-tuning, and escapes conventional clustering, and across simulations our framework maintains valid coverage while improving efficiency. The results show that dependence among an LLM's errors can be exploited rather than ignored.
