Education

- Cornell University, SC Johnson Graduate School of Management** Aug 2021–Present
Ph.D. in Quantitative Marketing
Minor Field: Applied Statistics
Committee: Vrinda Kadiyali (Chair), Emaad Manzoor, Omid Rafeian, Dan Kowal (Statistics)
- Korea Advanced Institute of Science and Technology** Feb 2015–Feb 2017
M.S. in Management Engineering, Information Systems
- Ulsan National Institute of Science and Technology** Mar 2010–Aug 2014
B.S. in Computer Science and Engineering, Minor in Finance and Accounting

Journal Publications

- Park, J. and **Kim, J.**, 2022. “A Data-Driven Exploration of the Race between Human Labor and Machines in the 21st Century,” *Communications of the ACM* [Manuscript] [SSRN] [Website] [Video] [Code]

Professional Experience

December & Company Asset Management, Seoul, South Korea Apr 2019–Jul 2021
Senior Researcher / Quantitative Portfolio Manager, Portfolio Research Team

- Develop Generative Models for Textual Factors to Predict and Explain Asset Returns based on SEC-10X (10-K, 10-Q, 10-KSB and 10-QSB)
- Implement a Sector Rotation Strategy through Cross-Sectional Variation over Data-driven Economic Cycles
- Construct Alternative Investment Strategies, especially for Commodity, REITs, Infrastructure and High Dividend-Paying ETFs
- Work as a Substitute for Mandatory Military Service

NICE Pricing and Information, Seoul, South Korea Aug 2016–Apr 2019
Quantitative Researcher, Financial Engineering Center

- Develop Non-Homogeneous Continuous-Time Markov Chain Models (NHCTMC) for Forward Looking Probability of Default under IFRS9 based on Sparse Transition Matrix of Credit Ratings
- Estimate Maximum Likelihood Proxy Portfolio of Fixed-Income Portfolio via Return based Style Analysis (RBSA)
- Implement Implied Volatility Surface of Index Futures Options via Heston Stochastic Volatility Model
- Work as a Substitute for Mandatory Military Service

Digital Economics and Enterprise Research Lab, KAIST, Seoul, South Korea May 2015–Feb 2017

- Empirical Research in Information Systems using Machine Learning and Econometrics (Advisor: Dr. Byungtae Lee)
- Accepted Three Conference Papers in ICIS 2016 and Awarded for the Most Innovative Research-in-Progress Paper Award (Runner-Up) in ICIS 2016
- Government & Industry Projects

Strategies for Online to Offline (O2O) Transport Services, The Korea Transport Institute
(Advisor: Dr. Lee, B.), Sep 2016–Nov 2016

The Effect of Model-Driven Development (MDD) on Information Systems Maintenance, LG
CNS (Advisor: Dr. Lee, B.), Sep 2015–Dec 2015

Computational Mathematical Science Lab, UNIST, Ulsan, South Korea Sep 2011–Feb 2015

- Research and Study for Complex Network Theory and Numerical Methods for Differential Equations
- Published a Paper in AIP Advances (Compressed Representation of the Hamiltonian Matrix) and Selected as an Undergraduate Research Opportunity Program (Optimal Control Strategies of Lotka–Volterra Equation)

NewsJAM, Ulsan, South Korea Jun 2013–Feb 2014

Chief Technology Officer (CTO), Co-Founder

- Developed NLP engines for news analysis including text summarization, key sentence extraction, topic modeling, and text clustering [PyCon Korea 2016]
- Open SW Incubator (\$60,000 as award), National IT Industry Promotion Agency, 2013

Honors & Awards

Nagesh Gavirneni Outstanding Doctoral Student Award, Cornell University	2026
AMA-Sheth Doctoral Consortium Fellow	2026
ISMS Doctoral Consortium Fellow	2025
FinTech@Cornell Student Fellowship	2022
Cornell SC Johnson College Doctoral Fellowship	2021–Present
Best Student Paper Award, Post-ICIS 2017 KrAIS Research Workshop	2017
Best Graduate Student Paper Award, KAIST	2017
Most Innovative Research-in-Progress Paper Runner-Up, International Conference on Information Systems (ICIS), Dublin, Ireland	2016
Editor’s Picks from the American Institute of Physics, AIP Advances	2016
Scholarship for Academic Excellence among 2015 Entering Class, KAIST	2015
Excellence Prize (Top 1%, 3rd Place over 322 teams) at Hackathon for Big Data, Ministry of Science, ICT and Future Planning	2014
Dean’s List for Four Semesters, UNIST	2010, 2012–2014
Undergraduate Research Opportunity Program, Korea Foundation for Advancement of Science & Creativity	2013
National Natural Science and Engineering Scholarship, Korea Student Aid Foundation	2010–2014

Patents

Kim, J., et al., “Automated Trading System and Method,” Korean Patent 10-2433324, Assignee: December & Company Inc., 2022. (Application No. 10-2019-0117628, filed Sep 24, 2019)

Teaching

Instructor

Cornell University

Fall 2025

BANA 5440 Introduction to Data Programming, MSBA

Selected Research Abstracts

“The Impact of San Diego’s Ban on Private Data in Algorithmic Rent Pricing: Evidence from Online Reviews with Large Language Models,” Kim, J. and Kadiyali, V. (Job Market Paper)

Algorithmic rent-pricing vendors combine landlords’ private operating data, including current rents, lease terms, and occupancy, with public information such as advertised rents and market conditions to recommend rents. Such private data can raise rents through coordination but can also improve demand forecasts and allow rents to fall when demand weakens. In 2025, San Diego banned the use of competitors’ private data in algorithmic rent pricing while continuing to permit pricing based on public data. We study the policy’s effect on renter satisfaction using 57,262 Google reviews of 1,139 apartment buildings. Each review contains an overall star rating and free text, from which human annotators measure satisfaction on attributes such as rent price and non-price services. Human annotations are costly, and annotators differ in how they use the rating scale, while scalable LLM annotations may systematically differ from human annotations. We develop a latent-outcome model that uses human annotations alone to identify latent satisfaction and its causal effect. We then use semiparametric efficiency theory to construct an estimator that uses LLM annotations to improve precision without imposing strong assumptions on how LLM annotations relate to human annotations. Nine months after the ban, overall star ratings fall by 0.14 points on a five-point scale. Under the policy, review text is 79% likely to express lower rent-price satisfaction and 95% likely to express higher satisfaction with non-price services. The pattern is more consistent with a loss of pricing efficiency than with weakened coordination. As a similar restriction extends nationwide, our findings inform the consequences of limiting competitors’ private data in algorithmic pricing.

“The Effects of Rent Control on Renter Experience and Consumption: Evidence from St. Paul’s 2022 Ordinance,” Kim, J., Anand, P., and Kadiyali, V.

How does housing affordability policy affect consumer experience and grocery spending? We examine St. Paul’s 2022 rent control policy using 110,258 renter reviews from 2,285 apartments and grocery sales data from 123 stores in the 18 months after the policy. We compare St. Paul (policy area) and surrounding spillover areas to comparable U.S. cities as controls. Renters rate their apartment experiences higher by 0.474 points (on a 5-point scale) in the policy area and by 0.157 points in the spillover areas. In the 18 months after implementation, no dimension of the multi-attribute service experience worsens, suggesting net satisfaction gains for renters in our time window. Grocery expenditure declines by 8% in the policy area and 3% in the spillover areas over the two years following implementation, through two mechanisms: the exit of higher-income renters from the policy area and likely increased rents in the spillover areas. Renter satisfaction thus improves while grocery demand falls in the affected neighborhoods. The findings inform apartment managers setting service quality under price regulation, grocery retailers adjusting assortment and pricing to changing neighborhood demographics, and policymakers weighing the consequences of rent control for renters, businesses, and spillover areas.

“Statistical Inference with Large Language Models: A Bayesian Framework for Measurement Errors,” Kim, J., Kowal, D., and Ruppert, D.

Large language models (LLMs) enable researchers to measure constructs of interest from text at scale. We study treatment effect estimation using LLM-measured outputs as causal outcomes. Standard plug-in estimators can substantially underestimate uncertainty, even when point estimates are unbiased. An LLM’s errors are not independent. It misreads semantically similar units in similar ways, inducing correlated errors. This correlation is information, not nuisance, but its structure is unknown a priori. We develop a Bayesian framework that combines a small labeled sample with large-scale LLM outputs to correct the LLM’s measurement errors. Estimating jointly, rather than in stages, allows labeled and unlabeled data to inform each other, while the learned covariance structure induces precision-weighted posterior inference, improving statistical efficiency over methods that assume independent errors. In a randomized experiment, we document that this dependence is real, survives fine-tuning, and escapes conventional clustering, and across simulations our framework maintains valid coverage while improving efficiency. The results show that dependence among an LLM’s errors can be exploited rather than ignored.
