Professional Experience

December & Company Asset Management, Seoul, South Korea Apr 2019–Jul 2021
Senior Researcher / Quantitative Portfolio Manager, Portfolio Research Team

- Develop Generative Models for Textual Factors to Predict and Explain Asset Returns based on SEC-10X (10-K, 10-Q, 10-KSB and 10-QSB)
- Implement a Sector Rotation Strategy through Cross-Sectional Variation over Data-driven Economic Cycles
- Construct Alternative Investment Strategies, especially for Commodity, REITs, Infrastructure and High Dividend-Paying ETFs
- Work as a Substitute for Mandatory Military Service

NICE Pricing and Information, Seoul, South Korea Aug 2016–Apr 2019
Quantitative Researcher, Financial Engineering Center

- Develop Non-Homogeneous Time Markov Chain Models (NHCTMC) for Forward Looking Probability of Default under IFRS9 based on Sparse Transition Matrix of Credit Ratings
- Estimate Maximum Likelihood Proxy Portfolio of Fixed-Income Portfolio via Return based Style Analysis (RBSA)
- Implement Implied Volatility Surface of Index Futures Options via Heston Stochastic Volatility Model
- Work as a Substitute for Mandatory Military Service

Digital Economics and Enterprise Research Lab, KAIST, Seoul, Korea May 2015–Feb 2017

- Empirical Research in Information Systems using Machine Learning and Econometrics (Advisor: Dr. Byungtae Lee)
- Accepted Three Conference Papers in ICIS 2016 and Awarded for the Most Innovative Research-in-Progress Paper Award (Runner-Up) in ICIS 2016
- Government & Industry Projects
 - Strategies for Online to Offline (O2O) Transport Services, The Korea Transport Institute (Advisor: Dr. Lee, B.), Sep 2016–Nov 2016
 - The Effect of Model-Driven Development (MDD) on Information Systems Maintenance, LG CNS (Advisor: Dr. Lee, B.), Sep 2015–Dec 2015

Computational Mathematical Science Lab, UNIST, Ulsan, Korea

Sep 2011–Feb 2015

- Research and Study for Complex Network Theory and Numerical Methods for Differential Equations
- Published a Paper in AIP Advances (Compressed Representation of the Hamiltonian Matrix) and Selected as an Undergraduate Research Opportunity Program (Optimal Control Strategies of Lotka–Volterra Equation)

NewsJAM, Ulsan, South Korea

Jun 2013–Feb 2014

Chief Technology Officer (CTO), Co-Founder

- Developed NLP engines for news analysis including text summarization, key sentence extraction, topic modeling, and text clustering [PyCon Korea 2016]
- Open SW Incubator (\$60,000 as award), National IT Industry Promotion Agency, 2013

Honors & Awards

AMA-Sheth Doctoral Consortium Fellow	2026
ISMS Doctoral Consortium Fellow	2025
FinTech@Cornell Student Fellowship	2022
Cornell SC Johnson College Doctoral Fellowship	2021–current
Best Student Paper Award, Post-ICIS 2017 KrAIS Research Workshop	2017
Best Graduate Student Paper Award, KAIST	2017
Most Innovative Research-in-Progress Paper Runner-Up, International Conference on Information Systems (ICIS), Dublin, Ireland	2016
Editor’s Picks from the American Institute of Physics, AIP Advances	2016
Scholarship for Academic Excellence among 2015 Entering Class, KAIST	2015
Excellence Prize (Top 1%, 3rd Place over 322 teams) at Hackathon for Big Data, Ministry of Science, ICT and Future Planning	2014
Dean’s List for Four Semesters, UNIST	2010, 2012–2014
Undergraduate Research Opportunity Program, Korea Foundation for Advancement of Science & Creativity	2013
National Natural Science and Engineering Scholarship, Korea Student Aid Foundation	2010–2014

Patents

Kim, J., et al., “Automated Trading System and Method,” Korean Patent 10-2433324, Assignee: December & Company Inc., 2022. (Application No. 10-2019-0117628, filed Sep 24, 2019)

Teaching

Instructor

“Estimating Treatment Effects with Large Language Models: Evidence from San Diego’s Algorithmic Pricing Ban,” Kim, J. and Kadiyali, V. (Job Market Paper)

How can we use LLM outputs for causal inference when they are imperfect rather than ground truth? In studies of human behavior, the object of interest is often how a person reads the text, not how an LLM does. LLMs read constructs from text at scale, but they hallucinate mentions that are absent, omit ones that are present, and miscalibrate the values they report. We develop a semiparametric Bayesian framework to estimate treatment effects on latent satisfaction underlying discrete ratings read from text, combining a small labeled sample with large-scale LLM outputs and correcting the LLM’s measurement errors. We apply the framework to San Diego’s 2025 algorithmic-pricing ban, which bans setting rents using competitors’ private data, across 58,293 Google Maps reviews of 1,686 apartments. Nine months after the ban, renters rate their apartments 0.15 points lower on a 5-point scale, counter to the policy’s pro-renter intent. In the text, satisfaction with rent price falls by 0.26, while satisfaction with non-price services rises by 0.37. The ban appears to increase pricing inefficiency and shift landlords from price to service competition, leaving renters worse off. As the DOJ–RealPage settlement extends a similar regime nationwide, our findings inform how policymakers evaluate its consequences.

“The Effects of Rent Control on Renter Experience and Consumption: Evidence from St. Paul’s 2022 Ordinance,” Kim, J., Anand, P., and Kadiyali, V.

How does housing affordability policy reshape consumer experience and grocery spending? We examine the impact of St. Paul’s 2022 rent control policy using 110,258 renter reviews from 2,285 apartments and grocery sales data from 123 stores in 18 months post-policy. We compare St. Paul (policy area) and surrounding spillover areas to comparable U.S. cities as controls. Renters rate their apartment experiences higher by 0.474 points (on a 5-point scale) in the policy area and by 0.157 points in the spillover areas. In the 18 months after policy implementation, no dimension of the multi-attribute service experience worsens, suggesting net satisfaction gains for renters in our time window. Grocery expenditure declines by 8% in the policy area and 3% in the spillover areas over the two years following implementation through different mechanisms: the exit of higher-income renters from the policy area and likely increased rents in the spillover areas. This reveals a policy tradeoff: improved renter satisfaction dampened grocery demand in affected neighborhoods. Our findings have implications for apartment managers to optimize service quality and consumer retention under price regulation; grocery retailers to recalibrate assortment and pricing for shifting neighborhood demographics; and policymakers to weigh the full consequences of rent control across renters, businesses, and spillover areas.

“Statistical Inference with Large Language Models: A Bayesian Framework for Measurement Errors,” Kim, J., Kowal, D., and Ruppert, D.

Large language models (LLMs) enable researchers to measure constructs of interest from text at scale. We study treatment effect estimation using LLM-measured outputs as causal outcomes. Standard plug-in estimators can substantially underestimate uncertainty, even when point estimates are unbiased. An LLM’s errors are not independent. It misreads semantically similar units in similar ways, inducing correlated errors. This correlation is information, not nuisance, but its structure is unknown a priori. We develop a semiparametric Bayesian framework to estimate treatment effects on latent satisfaction underlying discrete ratings read from text, combining a small labeled sample with large-scale LLM outputs to correct the LLM’s measurement errors. Estimating jointly, rather than in stages, allows labeled and unlabeled data to inform each other, while the learned covariance structure induces precision-weighted posterior inference, improving statistical efficiency over methods that assume independent errors. Together, these restore valid inference and improve precision over methods that assume independent errors. In a randomized experiment, we document that this dependence is real, survives fine-tuning, and escapes conventional clustering, and across simulations our framework maintains valid coverage while improving efficiency. The results show that dependence among an LLM’s errors can be exploited rather than ignored.
