Professional Experience

December & Company Asset Management, Seoul, South Korea Apr 2019–Jul 2021
Senior Researcher / Quantitative Portfolio Manager, Portfolio Research Team

- Develop Generative Models for Textual Factors to Predict and Explain Asset Returns based on SEC-10X (10-K, 10-Q, 10-KSB and 10-QSB)
- Implement a Sector Rotation Strategy through Cross-Sectional Variation over Data-driven Economic Cycles
- Construct Alternative Investment Strategies, especially for Commodity, REITs, Infrastructure and High Dividend-Paying ETFs
- Work as a Substitute for Mandatory Military Service

NICE Pricing and Information, Seoul, South Korea Aug 2016–Apr 2019
Quantitative Researcher, Financial Engineering Center

- Develop Non-Homogeneous Time Markov Chain Models (NHCTMC) for Forward Looking Probability of Default under IFRS9 based on Sparse Transition Matrix of Credit Ratings
- Estimate Maximum Likelihood Proxy Portfolio of Fixed-Income Portfolio via Return based Style Analysis (RBSA)
- Implement Implied Volatility Surface of Index Futures Options via Heston Stochastic Volatility Model
- Work as a Substitute for Mandatory Military Service

Digital Economics and Enterprise Research Lab, KAIST, Seoul, Korea May 2015–Feb 2017

- Empirical Research in Information Systems using Machine Learning and Econometrics (Advisor: Dr. Byungtae Lee)
- Accepted Three Conference Papers in ICIS 2016 and Awarded for the Most Innovative Research-in-Progress Paper Award (Runner-Up) in ICIS 2016
- Government & Industry Projects
 - Strategies for Online to Offline (O2O) Transport Services, The Korea Transport Institute (Advisor: Dr. Lee, B.), Sep 2016–Nov 2016
 - The Effect of Model-Driven Development (MDD) on Information Systems Maintenance, LG CNS (Advisor: Dr. Lee, B.), Sep 2015–Dec 2015

Computational Mathematical Science Lab, UNIST, Ulsan, Korea

Sep 2011–Feb 2015

- Research and Study for Complex Network Theory and Numerical Methods for Differential Equations
- Published a Paper in AIP Advances (Compressed Representation of the Hamiltonian Matrix) and Selected as a Undergraduate Research Opportunity Program (Optimal Control Strategies of Lotka–Volterra Equation)

NewsJAM, Ulsan, South Korea

Jun 2013–Feb 2014

Chief Technology Officer (CTO), Co-Founder

- Developed NLP engines for news analysis including text summarization, key sentence extraction, topic modeling, and text clustering [PyCon Korea 2016]
- Open SW Incubator (\$60,000 as award), National IT Industry Promotion Agency, 2013

Honors & Awards

AMA-Sheth Doctoral Consortium Fellow	2026
ISMS Doctoral Consortium Fellow	2025
FinTech@Cornell Student Fellowship	2022
Cornell SC Johnson College Doctoral Fellowship	2021–current
Best Student Paper Award, Post-ICIS 2017 KrAIS Research Workshop	2017
Best Graduate Student Paper Award, KAIST	2017
Most Innovative Research-in-Progress Paper Runner-Up, International Conference on Information Systems (ICIS), Dublin, Ireland	2016
Editor’s Picks from the American Institute of Physics, AIP Advances	2016
Scholarship for Academic Excellence among 2015 Entering Class, KAIST	2015
Excellence Prize (Top 1%, 3rd Place over 322 teams) at Hackathon for Big Data, Ministry of Science, ICT and Future Planning	2014
Dean’s List for Four Semesters, UNIST	2010, 2012–2014
Undergraduate Research Opportunity Program, Korea Foundation for Advancement of Science & Creativity	2013
National Natural Science and Engineering Scholarship, Korea Student Aid Foundation	2010–2014

“Estimating Treatment Effects with Large Language Models: Evidence from San Diego’s Algorithmic Pricing Ban,” Kim, J. and Kadiyali, V. (Job Market Paper)

Large language models (LLMs) can measure a target construct from text at a scale where collecting true labels would be prohibitive. But the LLM measures with error, inventing mentions that are absent, omitting ones that are present, and miscalibrating the values it reports. These are measurement errors on the ground truth, which a small validation sample of labeled data corrects. We develop a joint Bayesian framework that uses such LLM-measured outcomes to estimate treatment effects in panel data, jointly modeling the LLM’s measurement process to identify the effect on the underlying construct with valid uncertainty. We apply the method to San Diego’s 2025 algorithmic-pricing ban, which prohibits using competitors’ nonpublic data to set rents. Using 58,293 reviews of 1,686 apartments from Google Maps for San Diego and comparable control cities, renters rate their apartments 0.15 points lower overall (on a 5-point scale) in the nine months after the ban, counter to its pro-renter intent. The attribute-level estimates locate the decline. Satisfaction with rent price falls by 0.34, while satisfaction with services rises by 0.63. The ban appears to increase pricing inefficiency and shift landlord competition from price to service, so renters end up worse off overall rather than better as it intended. The DOJ–RealPage settlement now extends the same restriction nationwide, and our findings have implications for policymakers.

“The Effects of Rent Control on Renter Experience and Consumption: Evidence from St. Paul’s 2022 Ordinance,” Kim, J., Anand, P., and Kadiyali, V.

How does housing affordability policy reshape consumer experience and grocery spending? We examine the impact of St. Paul’s 2022 rent control policy using 110,258 renter reviews from 2,285 apartments and grocery sales data from 123 stores in 18 months post-policy. We compare St. Paul (policy area) and surrounding spillover areas to comparable U.S. cities as controls. Renters rate their apartment experiences higher by 0.474 points (on a 5-point scale) in the policy area and by 0.157 points in the spillover areas. In the 18 months after policy implementation, no dimension of the multi-attribute service experience worsens, suggesting net satisfaction gains for renters in our time window. Grocery expenditure declines by 8% in the policy area and 3% in the spillover areas over the two years following implementation through different mechanisms: the exit of higher-income renters from the policy area and likely increased rents in the spillover areas. This reveals a policy tradeoff: improved renter satisfaction dampened grocery demand in affected neighborhoods. Our findings have implications for apartment managers to optimize service quality and consumer retention under price regulation; grocery retailers to recalibrate assortment and pricing for shifting neighborhood demographics; and policymakers to weigh the full consequences of rent control across renters, businesses, and spillover areas.

“Statistical Inference with Large Language Models: A Bayesian Framework for Measurement Errors,” Kim, J., Kowal, D., and Ruppert, D.

Large language models (LLMs) enable researchers to measure latent constructs from text at scale, but their use in statistical inference raises challenges when measurement errors are correlated. We study treatment effect estimation when outcomes are measured using LLM outputs calibrated with a limited validation sample. We show that standard plug-in estimators and regression calibration can substantially underestimate uncertainty—even when point estimates are unbiased—because they fail to account for correlated measurement errors and calibration uncertainty. Using data from a randomized experiment, we empirically document that LLM measurement errors exhibit systematic dependence structured by embedding-space similarity, which persists even after fine-tuning and renders standard clustering approaches inadequate. To address this problem, we develop a Bayesian framework that jointly models calibration uncertainty and correlated measurement error by learning the error covariance structure from embedding geometry. Our approach provides coherent uncertainty quantification and clarifies when efficiency gains from LLM-based measurement are achievable.
